## **History of Region G Public Health Collaborative**

The Region G Public Health Collaborative, formally organized in the fall of 2008, is composed of nine Local Public Health Agencies. The service area includes Carter, Douglas, Howell, Oregon, Ozark, Reynolds, Shannon, Texas, and Wright Counties in rural Southern Missouri. The group first worked together in 2003 to implement a regional bioterrorism program funded by the Missouri Department of Health and Senior Services. A Regional Planner and Epidemiologist were employed by the lead agency, Texas County Health Department. The governing boards of each agency signed a Memorandum of Agreement (MOA) and developed plans to help neighboring counties in the event of an emergency or disaster. Meetings, trainings, and group exercises allowed the agencies to work together. Friendships developed as the members became acquainted and began to trust and depend on each other. Bonds formed between the members and the group began to view themselves more as a region and less as individual counties.

The federal Delta States Rural Network Development Project, awarded in 2007, provided funding to innovatively raise the Region G collaborative to yet another level. A Delta project member, Douglas County Health Department, worked directly with other local public health agencies in the Region G area. The project focused on practice management and provided professional development opportunities in a central location. The classes were presented by Rockhurst University and empowered the participants to become better leaders and managers with-in their own organizations. Also through the Delta project, the Douglas County Health Department Administrator developed a Region G intranet system. The system allows members of the Region G Public Health Collaborative to communicate easily, share documents and policies, exchange ideas and problem solve. The Region G Team Web Site was selected as a Model Practice by the National Association of County and City Health Officials' (NACCHO) Model Practice Program. The award was presented at the NACCHO Annual 2009 Conference at Orlando, Florida, in July 2009.

The Missouri Institute of Community Health (MICH) invited the nine local public health agencies to a meeting to discuss volunteer accreditation in January 2008. The members shared concerns about the accreditation standards. The group discussed potential changes that could be made in the standards to make the process achievable for small agencies. MICH informed the group of a NACCHO funding opportunity that could be of assistance in exploring all opportunities and options for the accreditation process. Douglas and Reynolds Counties developed a proposal and all nine county governing boards signed agreements and letters of support. The established regional intranet system facilitated sharing of information and proved invaluable in facilitating the communication needs of Region G during the process. In February 2008, the members were notified of a grant award. The nine local public health agencies in Region G and a group of three small rural counties in northern Missouri were twelve of the sixty demonstration site projects that were awarded nationally. The purpose of the project 10 was to

determine readiness of small rural health departments to national accreditation. The project was completed in November of 2008.

The group chose a NACCHO approved consultant to bring the group into a “formalized” collaborative through development of a three-year strategic plan and a charter. The consultant, from Iowa, was familiar with rural public health and the task of legal development of an organization. One of the top priorities of the plan was to collectively complete a regional community health assessment. Missouri Department of Health and Social Services requires the local public health agencies to complete an individual county community health assessment every three years. The Region G members determined that a regional assessment, completed with help from a university school of public health would enable them to compare data collected within the county to regional and state measures. This document could assist the collaborative in seeking funding for the group as the data would be compelling coming from a regional viewpoint. The group researched the legality of LPHAs working together and contracting with one another. They were able to identify the Missouri State Laws and Statutes that legally allow LPHAs to contract with each other, and with other agencies in the state and in other states. The result was a legally binding Charter that formalized the Region G Public Health Collaborative.

Completion of the survey tool allowed the nine counties to identify strengths and weaknesses and potential gaps. It was a consensus across all nine counties that one of the biggest gaps that surfaced was the lack of a working relationship with academia and the lack of participation in a research project. They collectively agreed to take a proactive approach and contact state universities for a summer intern to assist with a regional community health assessment. Southeast Missouri State University, John C. Kraemer, Ph.D and a student intern met with Region G members and began the assessment process. Dr. Kraemer and the student intern utilized the regional intranet for individual county data collection and processing. All agreed that this was the beginning of a partnership between Region G and Southeast Missouri State University School of Public Health. The community health assessment was conducted in the summer of 2009. The group contracted with Mary Peterson, Executive Director of Peterson and Associates, a private consulting firm, for the report development.

MICH offered Region G and the northern group the FIRST Mini Collaborative opportunity. The purpose of the three-year mini collaborative is Quality Improvement (QI) education for each of the individual agencies. This will assist us in our journey towards Missouri voluntary accreditation. Region G is presently working collaboratively with Region E on a project with John Hopkins University School of Public Health. The purpose of the project is to assess the readiness of the public health workforce to respond to public health emergencies. Both Region G and E are cementing their partnership by collectively writing for NACCHO funding to develop Excellence in Responding to Public Health Emergencies. These two projects demonstrate the

ability of small rural public health agencies' ability to collaborate and blur demographic county lines and individual agendas.

The Center for Local Public Health Services (CLPHS) at the MO Department of Health and Senior Services, has provided additional funding for fiscal year 2010 to the member organizations of Region G. The additional funding will allow the agencies to continue their journey for quality agencies and demonstrated leadership. The purpose of the funding is attendance at computer data training and development of a balanced scorecard. Once again rural LPHAs are stepping out and leading the way to the future for public health.

In the past H1N1 Influenza A outbreak, the Region G Public Health Collaborative has had an opportunity to test its ability to collaboratively get the Strategic National Stockpile (SNS) supplies quickly and cost effectively. Wright County Health Department took the lead and secured the supplies for the entire region. They then drove back across the region and distributed them efficiently and without difficulty. This was a cost saver and a time saver for all of the nine county health departments in Region G. This is yet another shining example of the benefits of collaboration and partnership.

Insert info on how we are working to battle COVID-19:

The Carter County Health Center received a Regional Implementation Team (RIT) contract from DHSS to support the coordination of COVID-19 vaccinations throughout Region G. Jaci McReynolds was the administrator of Region G's RIT, and along with a team of nurses, an epidemiologist, and project manager, they were able to help plan vaccination clinics, support vaccine administration, contribute to consistent regional messaging, and assist in many other services.

"All Health Departments in Region G are making substantial efforts to combat the current COVID-19 pandemic. Health Departments in Region G have made every effort to inform the public of quarantine guidance and procedures, masking and vaccination updates, and social media posts to explain the severity of this virus and best practices to keep the community safe. Other efforts made were COVID-19 vaccination clinics, both onsite and throughout the community, PCR and rapid testing. Battling this pandemic has been "all hands on deck," and it is truly a pleasure to be able to lift other departments in our region up, during times of trouble."

Through the DELTA project Region G Counties are collaborating on Health Literacy issues facing our citizens. The assistance provided by the DELTA project has greatly enhanced our capabilities in addressing health literacy issues in Region G.

Region G is committed to achieving voluntary state accreditation and has reaped the benefits of “stepping out of the box”, losing a “silo mentality”, and joining hands together across county lines, allowing the group to bring better health opportunities to all citizens.

## **Introduction**

A Community Health Assessment is a fundamental tool of public health practice utilizing a process of collecting and analyzing data and setting priorities for improving the health of a defined population based on data. Our aim is to describe the health of our communities, by presenting information on health status, community health needs, and available resources.

Local public health agencies in the Region G Public Health Collaborative are proud to present this report. This report is a comprehensive collection and analysis of data regarding health issues and needs in Carter, Douglas, Howell, Oregon, Ozark, Reynolds, Shannon, Texas, and Wright counties. The purpose of this assessment is to identify health issues of primary concern and establish priorities for strategic planning to effectively improve health in our communities and region.

The assessment will be shared with local, regional and state partners (government, social service agencies, businesses, health care providers, foundations, and consumers) who are positioned to partner with us to make an impact on health in our individual communities and our region. We hope utilizing this assessment will improve our collaborative efforts, especially across county lines and between the various sectors that make up the greater public health system.

Feedback from the community is an important tool in conducting a community health assessment. The assessment includes results from a community survey completed by approximately 1,000 residents of our region. Additional public comments or suggestions for community health improvement are welcomed and can be shared with local public health agencies in Region G at any time.

**Socioeconomic Indicators**

## County Demographics

Region G includes Carter, Douglas, Howell, Oregon, Ozark, Reynolds, Shannon, Texas, and Wright Counties in Southern Missouri.

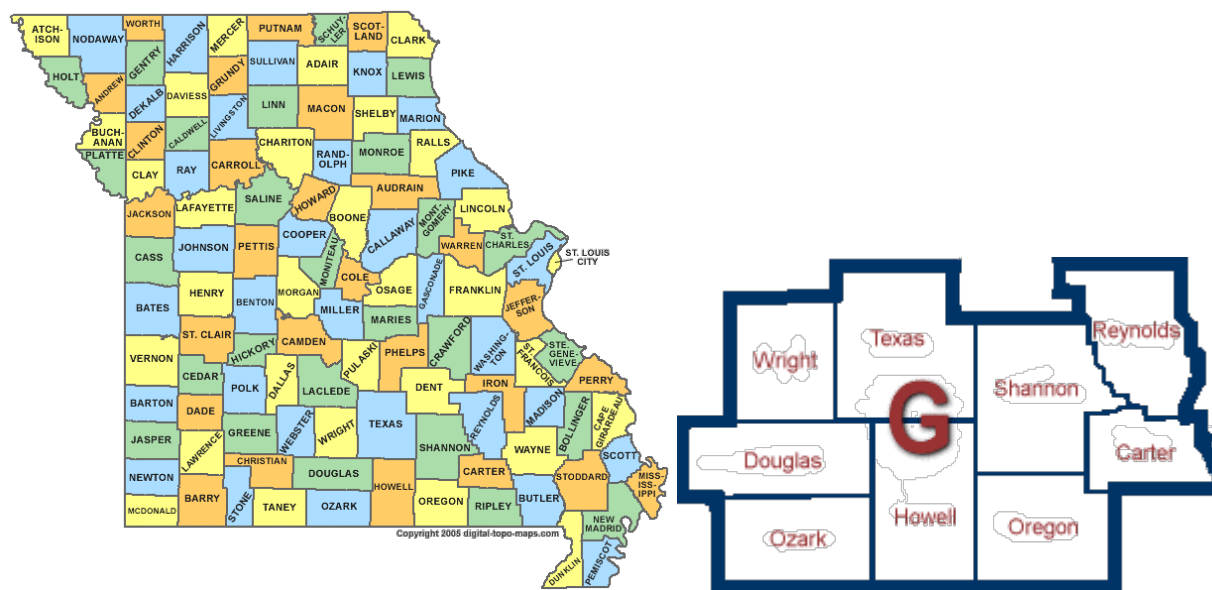

## Region G Description

Region G is located in south central Missouri and is classified by the Missouri Highway Patrol regional divisions. It includes nine counties: Carter County, Douglas County, Howell County, Oregon County, Ozark County, Reynolds County, Shannon County, Texas County, and Wright County.

The total population of Region G is approximately 137,110 persons (US Census 2019 estimate), a decrease from 140,000 in 2010. The nine rural counties cover a geographical area of 7,454 square miles. The population per square mile averages 18.39 and ranges from 7.8 in Reynolds County to 43.26 per square mile in Howell County.

Region G has very little racial or ethnic diversity, with an average of 95.4% Caucasian residents. An estimated two percent of residents are Hispanic or Latino. Less than one percent of the population is foreign-born and less than two percent speak a language other than English. The primary challenge for this rural region is poverty, which results in a lack of access to health care, health insurance, healthy foods and opportunities to thrive.

**Figure 1.1 Missouri Region G**

## Carter County

Carter County is located in the southeast corner of the Missouri Ozarks, in the central western portion of the Ozark Foothills Region of Southeast Missouri. Most of the county is within the Mark Twain National Forest. The Current River, part of the Ozark National Scenic Riverway, flows through Carter County. The county was organized on March 20, 1859, from portions of Oregon, Reynolds, Ripley, and Shannon counties. The county was named for Zimri A. Carter, a pioneer settler who came to Missouri from South Carolina in 1812.

According to the U. S. Census Bureau, the county has a total of 507 square miles. Carter County is bordered by Reynolds to the north, Wayne to the northeast, Butler to the southeast; Shannon to the west, Ripley to the south, and Oregon to the southwest.

According to the 2019 Census estimates, Carter County has a total population of 5,982 persons. The population density is 12 persons per square mile and 100% of residents live in an area classified as “rural.”

Carter County is part of Missouri’s 153<sup>rd</sup> Legislative District and Missouri’s 3<sup>rd</sup> Senatorial District that consists of Carter, Iron, Reynolds, St. Francois, Ste. Genevieve, and Washington counties as well as parts of Jefferson County. In the U. S. House of Representatives, Carter County is part of Missouri’s 8<sup>th</sup> Congressional District.

Primary sources of employment in Carter County include farming, healthcare and social assistance, construction, manufacturing and retail trade.

**Figure 1.2 Carter County Map**

## Douglas County

Douglas County is located in South Central Missouri. The county was officially organized on October 29, 1857 and is named after Stephen A. Douglas, a U. S. Senator Democratic presidential candidate.

According to the U. S. Census Bureau, the county has a total area of 814 square miles and a population of 13,185. The population density is 16 persons per square mile. The county has only one incorporated town, Ava, which is also the county seat.

Douglas County is bordered on the northwest by Webster County; on the north by Wright County; on the southwest by Texas County; on the east by Howell County; on the south by Ozark County; on the southwest by Taney County; and on the west by Christian County. Major highways include Route 5, Route 14, Route 95, and Route 181.

Douglas County is a part of Missouri's 144<sup>th</sup> Legislative District and is also part of Missouri's 20<sup>th</sup> Senatorial District. The 20<sup>th</sup> Senatorial District consists of Christian, Douglas, and Webster counties and part of Greene County. In the U. S. House of Representatives, Douglas County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Douglas County include farming, manufacturing, retail trade, and construction.

**Figure 1.3 Douglas County Map**

## Howell County

Howell County is located in South Central Missouri. Officially organized on March 2, 1851, the county is named after Josiah Howell, a pioneer settler in the Howell Valley.

According to the Census Bureau 2019 estimates, Howell County has a total area of 927 square miles and a population of 40,117. The population density is 43 persons per square mile. The largest city and county seat is West Plains, with a population of approximately 12,304 persons (2019 estimate).

Howell County is bordered on the north by Texas County; on the northeast by Shannon County; on the east by Oregon County; on the South by Fulton County, Arkansas; on the southwest by Ozark County; and on the northeast by Douglas County. Major highways include U. S. Route 160, Route 14, Route 76, and Route 142. Howell County is part of the Mark Twain National Forest.

Howell County is divided into two legislative districts in the Missouri House of Representatives. Some of the northern portion of the county is in District 143 and the remainder of the county is in District 151. Howell County is also a part of Missouri's 33<sup>rd</sup> Senatorial District that consists of Camden, Howell, Laclede, Oregon, Shannon, Texas, and Wright counties. In the U. S. House of Representatives, Howell County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Howell County include farming, healthcare and social assistance, retail trade, manufacturing, and accommodation and food services.

**Figure 1.4 Howell County Map**

## Oregon County

Oregon County is located in South Central Missouri. The county was officially organized on February 14, 1845, and was named for the Oregon Territory in the northwestern United States. Home to a large area of the Mark Twain National Forest, Oregon County contains more National Forest land than any other county in the state. It is also home to the Irish Wilderness, the largest federally protected wilderness area in Missouri. Canoeing and fishing are popular on the Eleven Point River, which is Missouri's only National Wild and Scenic River.

According to the U. S. Census Bureau, the county has a total area of 790 square miles and a population of 10,529 (US Census 2019 estimate). The population density is 13 persons per square mile.

Oregon County is bordered on the north by Shannon County; on the northeast by Carter County; on the east by Ripley County; on the Southeast by Randolph County, Arkansas; on the south by Sharp County, Arkansas; on the southwest by Fulton County, Arkansas; and on the west by Howell County. Major highways include U. S. Route 63, U. S. Route 160, Route 19, Route 99, and Route 142.

Oregon County is part of the 153<sup>rd</sup> Legislative District and Missouri's 33<sup>rd</sup> Senatorial District that consists of Camden, Howell, Laclede, Oregon, Shannon, Texas, and Wright counties. In the U. S. House of Representatives, Oregon County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Oregon County include farming, healthcare and social assistance, retail trade, transportation and warehousing, and manufacturing.

**Figure 1.5 Oregon County Map**

## Ozark County

Ozark County, officially organized on January 29, 1841, is located in South Central Missouri. The county was first called Decatur County after Commodore Stephen Decatur. The county was eventually renamed to Ozark County.

According to the U. S. Census Bureau, the county has a total population of 9,174 and total land area of 745 square miles. The population density is 12 persons per square mile.

Ozark County is bordered on the north by Douglas County; on the east by Howell County; on the southeast by Fulton County, Arkansas; on the south by Baxter County, Arkansas; on the southwest by Marion County, Arkansas; and on the west by Taney County. Major highways include U. S. Route 160, Route 5, Route 95, and Route 181.

Ozark County is a part of Missouri's 143<sup>rd</sup> Legislative District and Missouri's 29<sup>th</sup> Senatorial District that consists of Barry, Lawrence, McDonald, Ozark, Stone, and Taney counties. In the U. S. House of Representatives, Ozark County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Ozark County include farming, retail trade, accommodation and food service, construction, and manufacturing.

**Figure 1.6 Ozark County Map**

## Reynolds County

Reynolds County is located in the northwestern portion of the Ozark Foothills Region in Southeast Missouri. The county is near the geologic center of the Ozarks Highlands. Officially organized on February 25, 1845, the county was named in honor of Thomas Reynolds, a former governor of Missouri.

Reynolds County is bordered on the northwest by Dent County; to the northeast by Iron County; to the southeast by Wayne County; to the south by Carter County; and to the west by Shannon County. The major thoroughfares are U. S. Route 21, Route 49, Route 72, and Route 106.

Reynolds County has a total area of 808 square miles and a population density of 11 persons per square mile. The county population is approximately 9,174 persons (US Census 2019 estimate).

Reynolds County is divided into two legislative districts in the Missouri House of Representatives. The extreme northwestern part of the county is in District 150 and the remainder of the county is in District 152. The county is a part of Missouri's 3<sup>rd</sup> Senatorial District. In the U. S. House of Representatives, Reynolds County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Ozark County include farming, healthcare and social assistance, manufacturing, retail trade, and accommodation and food service.

**Figure 1.7 Reynolds County Map**

## Shannon County

Shannon County is located in South Central Missouri. The county was officially organized on January 29, 1841 and was named in honor of George F. “Peg-Leg” Shannon, a member of the Lewis and Clark Expedition. Shannon County was home to Missouri’s first copper mine that opened in 1846 and Missouri’s only manganese mine that opened during World War II.

Shannon County is the second largest county by land area in Missouri, boasting 1,003 square miles of land. It has a population of 8,166 persons (US Census 2019 estimates), resulting in a population density of just 8 persons per square mile. The county seat is Eminence, with a population of 584 persons (US Census 2017 estimate).

Shannon County is bordered on the north by Dent County; on the east by Reynolds County; on the southeast by Carter County; on the south by Oregon County; on the southwest by Howell County; and on the west by Texas County. The major thoroughfares are U. S. Route 60, Route 19, Route 99, and Route 106. Shannon County is part of the Mark Twain National Forest and the Ozark National Scenic River ways.

Most of Shannon County is included in the 152<sup>nd</sup> Legislative District. A small portion of the county is in the 147<sup>th</sup> Legislative District. Shannon County is part of Missouri’s 33<sup>rd</sup> senatorial District that also includes Camden, Howell, Laclede, Oregon, Texas, and Wright counties. In the U. S. House of Representatives, Shannon County is part of Missouri’s 8<sup>th</sup> Congressional District.

Primary sources of employment in Shannon County include farming, manufacturing, retail trade, healthcare and social assistance, transportation and warehousing, and forestry, fishing and related activities.

**Figure 1.8 Shannon County Map**

## Texas County

Texas County is located in South Central Missouri. The county was first named after William H. Ashley, the first lieutenant governor of Missouri. When the county was officially organized on February 14, 1845, it was renamed for the Republic of Texas.

Texas County is the largest of Missouri's 114 counties, with 1,177 square miles of land. In fact, Texas County is larger than the nation's smallest state, Rhode Island.

Texas County is one of the few counties in the United States to border as many as eight counties. The county is bordered on the north by Pulaski County; to the north by Phelps County; to the northeast by Dent County; to the east by Shannon County; to the south by Howell County; to the southwest by Douglas County; to the west by Wright County; and to the northwest by Laclede County. The major thoroughfares through the county are U. S. Route 60, U. S. Route 63, Route 17, Route 32, Route 38, and Route 137.

The county population is 25,398 (US Census 2019 estimate), resulting in a population density of 22 persons per square mile. Houston is the county seat with a population of 2,075 persons (US Census 2017 estimate).

Texas County is divided into two legislative districts in the Missouri House of Representatives. Some of the eastern portions of the county are in District 144. The remainder of the county is in District 147. Texas County is also a part of Missouri's 33<sup>rd</sup> Senatorial District. In the U. S. House of Representatives, Texas County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Texas County include farming, retail trade, manufacturing, healthcare and social assistance, construction, and accommodation and food service.

**Figure 1.9 Texas County Map**

## Wright County

Wright County is located in South Central Missouri. The County was officially organized in January 1841 and is named after Silas Wright, a former Congressman, a U. S. Senator and Governor of New York.

According to the U. S. Census Bureau, the county has a total area of 682 square miles. Wright County is bordered by Laclede County on the north; Texas County on the east; Douglas County on the south; and Webster County on the west. Major highways include U. S. Route 60, Route 5, Route 38, and Route 95. A portion of the county is located in the Mark Twain National Forest. The Gasconade River and its tributaries flow through the county.

The county population is 18,289 persons (US Census 2019 estimate). Only 609 residents live in the county seat, Hartville. Mountain Grove has a population of 4,676 persons. Mansfield has 1,255 residents, and Norwood has 669 (US Census 2017 estimate).

Wright County is a part of Missouri's 144<sup>th</sup> Legislative District and Missouri's 33<sup>rd</sup> Senatorial District. In the U. S. House of Representatives, Wright County is part of Missouri's 8<sup>th</sup> Congressional District.

Primary sources of employment in Wright County include farming, retail trade, construction, and manufacturing.

**Figure 1.10 Wright County Map**

## Region G Demographics

Located in rural Southern Missouri, the Region G service area comprises nine counties. According to the 2019 Missouri Census estimates, the nine counties have a population of 137,110 residents and cover a geographical area of 7,454.35 square miles. The population per square mile averages 18.39 and ranges from 7.8 in Reynolds County to 43.26 per square mile in Howell County. Table 1.1 compares the counties by population, land area, median household income, and percentage of persons below poverty.

**State Population, as of April 01, 2020** .....6,154,193  
**Land Area (sq. miles), 2010**.....68,741.52

## Age and Gender

According to U. S. Census estimates, children under 18 years of age makeup 22.6% of the population in Region G. Persons 18 – 24 years old comprise only 7.1% of the population, while those age 25 – 44 make up 21.6% and adults 45 – 64 years old make up 26.9% of the population. Persons 65 and older account for 21.6% of the population in the region. Of the five age divisions, four are fairly consistent, at a range of 21 – 27%, but the age group of 18 – 24 year olds comprises only 7.1% of the population in the region.

**Figure 1.12 Comparison of Age as a Percentage of the Population, 2018**

The population is fairly evenly split by gender for each age group, except for the group of 65 and older. Among this group, there is a difference of 2,187 more females than males. The smallest difference is among the age group of 45 – 64 year olds, with only 170 more females than males. Differences among the other age groups include 776 more males than females among 25 – 44 year olds, 693 more males than females among 18 – 24 year olds, and 623 more males than females among those less than 18 years old. There are more males than females among those younger than 45 and more females than males among those ages 45 and older.

## Age Distribution

The age of the population is a demographic characteristic affecting the delivery of health care services. A lower percentage of the population in Region G is under 18 years of age and a higher percentage of the population is under the age of 5. The percentage of the Region G population under age 18 is 4.4%. In comparison, 22.3% of the population of Missouri and 22.3% of the population of the United States is under age 18. People aged 65 and older account for 4.5% of the Region G population, 16.5% of the state population, and 16.5% of the U. S. population. Table 1.3 shows the age distribution for the population in 2018. Table 1.4 shows the age distribution for the population in 2019-20. Table 1.5 compares Region G, state, and national estimates.

**Table 1.4 Age Distribution, 2018**

## Race Analysis

According to U.S. Census population estimates, 94% of the Region G population is Caucasian. Black and African American persons represent 0.9%, American Indian and Alaskan persons combine for 1.1%, Asian persons represent 0.3%, Hawaiian and Pacific natives represent 0.1%, and Hispanic and Latino natives comprise 2.1%, and persons identifying themselves as two or more mixed races made up 2.2% of the total Region G population. Population numbers by race from 2019 data are shown in Figure 1.13.

## Educational Attainment

On average, 82.57% of Region G residents age 25 or older have a high school diploma or higher, compared to 89.90% of Missourians. An average of 13.58% of residents have a bachelor's degree or higher, compared with the Missouri average of 29.20% persons.

## Children with Disabilities Receiving Special Education Services

According to the Missouri Department of Elementary and Secondary Education, 4,704 students with disabilities received special education services during the 2019 school year, with a range from 152 students in Shannon County to 1,441 in Howell County.

**Figure 1.15 Children with Disabilities Receiving Special Education Services, 2021**

County	Autism	Intellectual Disability	Emotional Disturbance	Language Impairment	Speech Impairment	Specific Learning Disability	Traumatic Brain Injury	Young Child with a Dev. Delay	Other Disability	Total

Retrieved from [https://apps.dese.mo.gov/MCDS/FileDownloadWebHandler.ashx?filename=f55dd324-a127ChildCount\\_by\\_County.xls](https://apps.dese.mo.gov/MCDS/FileDownloadWebHandler.ashx?filename=f55dd324-a127ChildCount_by_County.xls)

Notes: County totals represent the number of children ages 3 – 21 reported by the public school districts in each county. Totals include additional students not listed in a category due to the risk of personal identification due to small numbers. Children served by state operated programs, including Missouri School for the Blind, Missouri School for the Deaf, and Missouri School for the Severely Disabled; Division of Youth Services and Department of Corrections are not reflected in these totals. Children are reported by their primary disability category only.

### **Adult Literacy and Health Literacy**

The nine counties in Region G have a higher percentage of residents lacking basic prose literacy skills than the Missouri average, with four counties falling into the highest category in Missouri for residents lacking basic prose literacy skills (Wright 11%, Shannon 12%, Oregon 11%, and Reynolds 11%). Ten percent of residents of Douglas, Ozark, Texas, and Carter County and 8% of Howell County residents are reported to lack basic prose literacy skills.

The term “lacking basic prose literacy skills” is defined by the National Center for Education Statistics as being unable to do much more than sign a form or search a simple document to find out what can be eaten before a medical test.

However, when asked in a telephone survey how easy it is for them to get advice or information about health and medical topics, on average, nine in ten of survey participants said it was “easy” or “somewhat easy.” A high percentage also reported it was “easy” to understand information from health professionals and written materials about health. The survey relied on self-assessment of understanding and access to information.

**Table 1.12 Adult Literacy and Health Literacy**

	Easy or Somewhat Easy to get Advice or Information about Health or Medical Topics <sup>1</sup>	Easy or Somewhat Easy to Understand Information from Doctors or Other Health Professionals <sup>1</sup>	Easy to Understand Written Information about Health <sup>1</sup>	Percent Lacking Basic Prose Literacy Skills <sup>2</sup>

## Occupancy Characteristics

According to the 2019 U.S. Census, there are 54,006 family households in Region G, of which 56,864 (94.97%) are married couple families.

Household occupancy characteristics are described in Table 1.14.

**Table 1.14 Household Occupancy Characteristics, 2015-2019**

	<b>Carter</b>	<b>Douglas</b>	<b>Howell</b>	<b>Oregon</b>	<b>Ozark</b>	<b>Reynolds</b>	<b>Shannon</b>	<b>Texas</b>	<b>Wright</b>

The median value of owner-occupied housing units in Region G is \$102,550 and the average monthly cost with a mortgage is \$902. Median gross rent is \$591 a month. Average household size is 2.49 persons, and on average, more than eight in ten residents of Region G were living in the same house a year ago.

Housing characteristics are described in Table 1.15.

**Table 1.15 Housing Characteristics by Value, Cost, Internet Access and Size, 2015-2019**

Retrieved from [https://ephtn.dhss.mo.gov/EPHTN\\_Data\\_Portal/](https://ephtn.dhss.mo.gov/EPHTN_Data_Portal/).

Six of the counties in Region G have a higher percentage of homes without any bedrooms than the state average. Carter County has the highest rate, with nearly one in three homes without a bedroom.

Five of the counties also have a higher percentage of homes that are overcrowded, compared to the state average. Overcrowding rates in Region G range from 1.14% in Texas County to 2.81% in Carter County, compared to the state average of 1.61%.

**Table 1.17 Percent of Units that are Mobile Homes, have No Bedroom, and are Overcrowded, 2010 - 2014**

### Safety and Sanitation: Plumbing Facilities, Heat Source, Telephone Service

In the rural communities of south central Missouri, an average 1.25% of homes do not have plumbing. This is more than double the Missouri average. More than 5% of homes are without a telephone, compared to state average of 2.10% homes.

Much of Region G is densely wooded area, which likely contributes to wood burning as the main source of heat for nearly one in four homes. This compares to an average of 3.4% of homes in Missouri who burn wood for heat.

**Table 1.18 Housing Characteristics by County: Plumbing, Heat and Telephone Service, 2019**

	Total Housing Units	Percent without Complete Plumbing Facilities	Percent with no Telephone Service	Percent of Units Using Utility Gas to Heat	Percent of Units Using Bottled, Tank or LP Gas to Heat	Percent of Units Using Fuel Oil or Kerosene to Heat	Percent of Units Using Wood to Heat	Percent of Units Using No Fuel to Heat

Selected Housing Characteristics, American Community Survey, 2019

## Safety and Sanitation: Vacancy and Age of Residence

Vacancy rates of housing units in Region G range from 13.1% in Howell County to 35.6% in Reynolds County. Vacancy rates in eight of the nine counties are higher than the state average of 13.5%.

The average vacancy rate for rentals is higher in the region than that of homeowners, at 6.2% to 3.1% respectively. However, rental vacancy rates are actually lower than homeowner vacancy rates in one of the nine counties. The highest rate of rental vacancy is 9.9% in both Howell and Oregon Counties, while the highest rate of homeowner vacancy is 3.9% in Texas County.

**Table 1.19 Housing Characteristics by County: Vacancy and Age of Residence, 2019**

	<b>Total Housing Units</b>	<b>Vacant Housing Units</b>	<b>Percent of Units Vacant</b>	<b>Homeowner Vacancy Rate</b>	<b>Rental Vacancy Rate</b>	<b>Percent of Homes Built Before 1970</b>

Missouri	2,790,397	375,876	13.50%	1.7	6.3	26.20%

2019: ACS 5-Year Estimates Data Profiles, Selected Housing Characteristics

The age of housing units in Region G is higher, on average, than the Missouri average. The highest rate of homes built before 1970 is found in Oregon County, with 40.3%, while the lowest rate of homes built before 1970 is found in Carter County with only 22.3%.

## Fair Market Rent

According to the National Low Income Housing Coalition, the average fair market rent for one bedroom units in Region G was \$503 in 2021 compared to a statewide average of \$690. Fair market monthly rental rates are shown in Table 1.20.

**Table 1.20 Fair Market Rent and Annual Income Needed to Afford Housing by County 2021**

	<b>1 Bedroom Fair Market Rent</b>	<b>Annual Income Needed to Afford 1 Bedroom</b>	<b>2 Bedroom Fair Market Rent</b>	<b>Annual Income Needed to Afford 2 Bedroom</b>	<b>3 Bedroom Fair Market Rent</b>	<b>Annual Income Needed to Afford 3 Bedroom</b>

### **Housing Affordability**

The National Low Income Housing Coalition reports each year on the amount of money a household must earn in order to afford a rental unit based on Fair Market Rent and an accepted limit of 30% of income for housing costs.

In Region G the affordable rent at estimated mean renter wages is an average of \$433, which is approximately \$70 less than the fair market rent for a one-bedroom housing unit. The affordable rent for a person making minimum wage in Missouri is \$536 a month. The rent affordable for a person receiving Supplemental Security Income (SSI) benefits in Missouri is \$238 a month. The imbalance of income versus rent makes nearly one in four households in Region G housing cost burdened.

Between 2008 – 2012 and 2013 – 2017, the rate of housing cost burdened households dropped for all but one of the nine Region G counties, leaving only Douglas County and Oregon County with a higher rate of housing cost burdened residents than the Missouri average.

**Table 1.21 Renters Wages, Rental Affordability, and Housing Cost Burdened Households**

	Percent Renters <sup>1</sup>	Estimated Mean Renter (Hourly) Wage <sup>1</sup>	Rent Affordable at Mean Renter Wage <sup>1</sup>	Estimated Renter Median Household (Annual) Income <sup>1</sup>	Housing Cost Burdened Households <sup>2</sup> 2008 – 2012	Housing Cost Burdened Households <sup>2</sup> 2013 - 2017	Housing Cost Burdened Households Percent Change

## Housing Status for Children

Child homelessness rates in Region G increased between 2013 and 2017, at a rate higher than the state average. Wright County saw a 62.5% increase, and Carter County experienced a 92.6% increase.

Nearly seven in ten (69.4%) Region G children lived in married family homes in 2017 (2013 – 2017 data). That compares to the state average of 66.2% of children, and is an increase in Region G from 65.7% in the prior reporting period (2008 – 2012).

Nearly half (48.78%) of all grandparents who live with their grandchildren in Region G are responsible for the child's care. This compares to 44.75% of grandparents across Missouri. Housing status for children by family marital status and homelessness are shown in Table 1.22.

## Economic Analysis

### Labor Force and Unemployment

The average travel time to work for Region G residents is 27.3 minutes, compared to the Missouri average of 23.9 minutes. There are fewer available jobs in Region G than there are persons 18 – 64 years old. However, on average, only half of Region G residents 16 and older are in the civilian workforce. This compares to 62.6% of Missourians.

In 2019, Region G had a total labor force of 43,515 persons. In that time, nearly 53,000 jobs were provided in Region G. The average unemployment rate in 2019 for the region was 2.5%, higher than the state average of 4.2%. Oregon County and Reynolds County had unemployment rates equal to or lower than the state average in 2017. The other seven counties had a higher unemployment rate than the state average. The highest unemployment rates in the region were in Douglas County with 7.7%, Shannon County with 7.3% and Ozark with 7.2%.

## Types of Labor

In 2019, health care and social assistance was the largest employment sector for Missouri with 462,431 jobs, followed by retail trade with 3,821,914 jobs. In Region G, farming was the largest sector with 8,413 jobs, followed by retail trade with 6,843.

Farming was the largest employment sector for Douglas, Oregon, Ozark, and Wright Counties. Health care and social assistance was the largest sector for Howell and Reynolds Counties, and manufacturing was the largest major sector for Shannon County.

## Income: Median Household Income and Per Capita Income

In 2019, the median household income for Region G was \$35,353, significantly lower than the state average of \$51,542 and the national average of \$62,843. Between 2017 and 2019, median household income increased for all Region G counties except Carter County and Ozark County.

The average per capita income in Region G in 2019 was \$20,977, compared to the Missouri average of \$30,810 and the US average of \$34,103. Between 2017 and 2019, the per capita income increased in all Region G counties, with Shannon County dropping by \$516. The US average also increased, and the Missouri average increased by an average of \$2,528.

**Table 1.25 Median Household Income and Per Capita Income, 2017-2019**

## Living Wage

The living wage shown is the hourly rate that an individual must earn to support a family, if the sole provider and working full-time (2,080 hours per year). The average living wage in 2021 for a family of four (two adults and two children) in Region G is \$17.30 per hour. The minimum hourly wage is \$9.45.

**Table 1.27 Hourly Living Wage by Family Size, 2021**

### Temporary Assistance for Needy Families (TANF)

In September 2021, a total of 185 families in Region G received TANF benefits. This compares to 280 families who received TANF assistance during the same period two years ago. The number of families receiving TANF has been significantly reduced in all Region G counties except Carter and Douglas counties since September 2019.

Howell County had the highest number of TANF recipients with 58 families. Reynolds County had the lowest number of TANF recipients with 7 families. Average TANF payments per family decreased between September 2019 and September 2021 in four Region G counties, but increased in Carter, Douglas, Shannon, Texas, and Wright counties.

**Table 1.28 TANF Benefits, September 2019 and September 2021 Comparison by County**

	Total Families Receiving TANF Sep 2021	Total Families Receiving TANF Sep 2019	TANF Recipients as % of total population Sep 2019	Total TANF Payments Sep 2021	Total TANF Payments Sep 2019	Average TANF Payments per Family Sep 2021	Average TANF Payments per Family Sep 2019

### Supplemental Nutrition Assistance Program (SNAP)

In September 2019, Region G had a total of 23,725 persons receiving SNAP benefits. This is a significant decrease from 2012, when the monthly regional average was 32,966 persons.

The average monthly SNAP benefit per person in the region in September 2019 was \$110, lower than the state monthly average of \$120 per person.

The total monthly dollar value of benefits issued in the region in September 2019 was more than \$2.6 million. Howell County had the highest total monthly benefits issued at \$807,698, while Carter County had the lowest at \$119,488.

Across the region, approximately half of children live in families receiving SNAP. Shannon County had the highest percentage of children living in families receiving SNAP benefits, with 50.4%, and Texas County had the lowest rate with 38.9%. All nine counties have a higher participation rate than the Missouri average of 32.6% of children.

### National School Lunch Program

According to information provided by the Interdisciplinary Center for Food Security at University of Missouri Extension, 81% of all Region G students participated in the National School Lunch Program in 2016. This was a decrease from 82.5% in 2013.

Between 2013 and 2016, all but two of Region G counties saw a decrease in the number of children participating in the School Lunch Program. Shannon County saw an increase of 3.8%, and Reynolds County had an increase of 16.7%.

Percentages of participation in Region G are higher than statewide average participation at 81.0% and 78.4% respectively in 2016.

**Table 1.29 National School Lunch Program, 2013 to 2016 Comparison**

## Tax Credits

According to information provided by the Brookings Institute, only 80 – 85% of tax filers who are eligible for Earned Income Tax Credits (EITC) claim the credit. The Institute states the participation gap is largest in communities that have working families earning less than \$10,000 and among families with more than two children.

Brookings Institute also explains the Additional Child Tax Credit (ACTC), the refundable version of the Child Tax Credit (CTC), increases the refund amounts available to many Earned Income Tax Credit eligible filers.

In 2014, Region G residents filed nearly 14,000 tax returns claiming EITC and just over 3,000 claiming CTC. Together, these tax credits brought over \$37 million federal dollars back to families in Region G.

Filers received an average of \$2,500 each in EITC and \$750 each in CTC. The highest average EITC reimbursement was received in Shannon County at an estimated \$2,708 per filer. Ozark County filers received the highest CTC reimbursements at an estimated average of \$878 per filer.

**Table 1.30 Earned Income Tax Credit and Child Tax Credit Returns, 2014**

## Social Security Administration Benefits

The Social Security Administration reported that a total of 5,412 persons in Region G received SSA benefits in 2017. This is a decrease from 5,808 in 2012. A total of \$2.7 million were issued to persons in Region G in 2017, at an approximate value of \$513 per person. This compares to the state average of \$558 per person.

## Poverty

The US Census estimates that just under one in four (20.8%) Region G residents lived below the poverty level in 2019. Ozark County had the highest rate of poverty rate in the region in 2019 at 22.7% of the total population, an increase from 21.5% in 2018.

Children living in poverty decreased between 2018 and 2019 for every county in Region G except for Reynolds County. Their child poverty rate increased by 2.91%.

**Table 1.32 Poverty Rate by Total Population and Children in Poverty**

## Seniors in Poverty

In 2013, the senior poverty rate was highest in Region G in Oregon County at 23.6% and lowest in Reynolds County at 5.7%. This compares to a statewide poverty rate among seniors of 11.8%.

Between 2013 and 2016 the poverty rate among seniors decreased. Douglas, Ozark and Texas Counties, remained level in Wright County, and increased in the five other counties. The most significant changes were a 20.47% drop in Ozark County and a 144% increase in Reynolds County.

**Figure 1.17 Seniors in Poverty, 2013 to 2016 Comparison**

## Child Care

Region G has 61 licensed and 5 license-exempt child care facilities, with a total capacity of 2,101 children. This is a decrease from 71 licensed facilities in 2012 with a capacity of 1,784 children. The 2019 average daytime costs for full-time child care range from \$10.73 to \$19.66. This is an increase from \$9.94 in 2013.

**Table 1.31 Child Care Capacity and Cost by Type of Facility, 2019**

## **Section II**

### **Environmental Health Risk Factors**

## Childhood Lead Poisoning

Lead poisoning is one of the most common and preventable environmental health problems in Missouri. Lead exposure in children can cause learning and behavioral problems, lower IQ levels and interfere with growth and hearing. According to the CDC, lead blood levels of 5 mcg/dL are considered higher than a normal or safe level in children. If a child's blood lead level is 45 mcg/dL or higher, the child will need treatment to bring the level down. Any elevated test result means a child has been exposed to lead.

The rate of children in Region G with confirmed blood lead levels above normal or safe increased between 2012 and 2017 at a rate of 0.5%. The rate of 19.3% now exceeds the state rate of 18.9%.

Counties with the highest rate of change in high blood levels among children between 2012 and 2017 include Wright County with a 70.9% increase, Carter County with a 15.9% increase, and Texas County with a 12.7% increase. The other six counties in Region G showed a decrease in rate between 2012 and 2017.

**Table 2.1 Elevated Blood Lead Level Tests among Children <72 Months Old, 2012 to 2017 Comparison**

	Number of Confirmed Tests with outcomes of >5 ug per dL Test Level 2012	Percent of Population	Number of Confirmed Tests with outcomes of >5 ug per dL Test Level 2017	Percent of Population	Percent Change 2012 to 2017

## Housing Age

Studies indicate childhood lead poisoning can be directly related to availability of safe, affordable housing. According to the National Center for Healthy Housing, the major remaining cause of lead poisoning is lead-based paint in housing, especially housing built before 1950, when lead paint was commonly used. The lack of affordable housing can result in families living in older dwellings with deteriorating lead paint, placing children at increased risk for lead poisoning.

Most commonly, children are poisoned by lead dust from deteriorated paint in poorly maintained older houses. Prior to about 1940, leaded paints typically contained high amounts of lead, ranging from 10% to as much as 50%. In the early 1950s, the paint industry began reducing lead content, although many paints still contained harmful amounts of lead. Federal regulations limited lead content in 1972 and effectively banned lead in residential paints in 1978.

On average, more than half of the housing units in Region G were built before 1980, increasing the likelihood that lead from old paint will be present.

**Table 2.2 Housing Units by Age, 2019**

	<b>Total Housing Units</b>	<b>Percent Occupied Housing Units</b>	<b>Percent Built before 1950</b>	<b>Percent Built between 1950 – 1979</b>	<b>Total Percent of Housing Built Before 1980</b>

## Indoor Air Quality

Good health depends on clean indoor air, yet research shows that air pollution levels are higher indoors than outside. Since Missourians spend an average of 90 percent of their time indoors, according to the Missouri Department of Health and Senior Services, the quality of indoor air is a significant concern. Indoor air pollutants can contribute to asthma and allergic reactions, chemical poisoning and some types of cancer.

Radon is a colorless, odorless and tasteless gas that poses a health risk to humans primarily when it is found inside homes and other buildings. Exposure to radon is the second leading cause of lung cancer. Homes can be tested for radon, and steps can be taken to reduce the level of radon in indoor air.

The number of housing units tested for radon and the percent that had elevated levels of radon are shown in Table 2.3.

**Table 2.3 Radon Testing of Housing Units, 2008-2018**

	<b>Percent of Housing Units Tested for Radon 2018</b>	<b>Percent of Tested Housing Units that are Elevated for Radon 2018</b>

## Outdoor Air Quality

Exposure to air pollution, even for a short amount of time can have a wide range of health effects including difficulty breathing, impact on heart and lung disease, even premature death. Some people may have a greater impact from pollution. For example, children are often more vulnerable to pollutants.

**Table 2.4 Outdoor Air Quality, 2011**

## Emissions

Motor vehicle emissions contribute to climate change and air pollution. Vehicles emit carbon dioxide, methane, nitrous oxide, particulate matter, and volatile organic compounds. Carpooling, walking or bicycling can reduce harmful emissions, but rural communities may not have supportive infrastructure in place.

**Table 2.5 Travel Mechanism to Work, 2010 – 2014**

	<b>Drove Alone to Work<sup>1</sup> 2010 – 2014</b>	<b>Carpooled to Work<sup>1</sup> 2010 - 2014</b>	<b>Used Public Transportation to Work<sup>1</sup> (excluding taxis) 2010 - 2014</b>	<b>Walked or Rode a Bicycle to Work<sup>1</sup> 2010 - 2014</b>	<b>Have Sidewalks in Their Neighborhood<sup>2</sup> 2016</b>	<b>Have Roads and Streets with Shoulders or Marked Lanes for Bicycling in Their Community<sup>2</sup> 2016</b>

## Carbon Monoxide

Carbon monoxide is a colorless, odorless gas that can be deadly. It is found in fumes produced any by burning fuel in cars or trucks, small engines, stoves, lanterns, grills, fireplaces, gas ranges, or furnaces. Carbon monoxide can build up indoors and poison people and animals who breathe it. People often describe the symptoms of carbon monoxide as “flu-like.” Breathing in too much carbon monoxide can make a person pass out and can be fatal. People who are sleeping or are drunk can die from carbon monoxide poisoning before they even realize they have symptoms. Everyone is at risk, but infants, the elderly, and people with chronic heart disease, anemia, or breathing problems are more likely to get sick from carbon monoxide.

**Table 2.6 ER Visits and Hospitalizations due to Carbon Monoxide, 1999 – 2013**

	ER Visits Due to Carbon Monoxide (CO) (per 100,000) 1999 - 2013	Average age-adjusted rate of hospitalizations (per 100,000) 1999 - 2013

## Agriculture

Hazardous substances have been released into the environment from multiple sources. Releases may come from agricultural and industrial activities, mining operations, landfills, leaking underground storage tanks, or transportation-related accidents.

Treating the land to control pests, weeds, brush, or grass or to fertilize cropland can have a negative impact on the environment and public health. Lime is used to alter the soil pH if it is too acidic for crops, but it can irritate the eyes, nose and throat and can burn the skin.

Fertilizer can also irritate the eyes, nose, and mouth and can upset the stomach if accidentally swallowed. It may also contain weed killer and insecticides that can be dangerous to health.

Herbicides and insecticides contain a number of ingredients that are likely to irritate the eyes and skin. They can also irritate the lungs if breathed in and are dangerous if swallowed. Poisoning can lead to a mild stomach ache or seizures.

**Table 2.7 Percent of Land Treated, 2017**

	Percent of land area treated to control insects (in square miles)	Percent of land area treated to control weeds, grass, or brush (in square miles)	Percent of land area treated with commercial fertilizer, lime, and soil conditioners (in square miles)	Percent of land area treated as fertilized cropland (in square miles)	Percent of land area treated as fertilized pastureland and rangeland (in square miles)

## **Section III**

### **Public Safety and Domestic Violence**

## Crime

In 2018, the Missouri State Highway Patrol's Uniform Crime Reporting Program identified a total of 9 murders, 324 assaults, and 2,087 robberies, burglaries, larceny thefts and motor vehicle thefts. Region G also had 26 rape or rape attempts, 32 cases of arson, 2,108 property crimes, and 370 violent crimes.

These numbers compare to 2012 reports of 9 murders, 334 assaults, and 831 burglaries, 2,186 larceny thefts, 146 vehicle thefts, and 14 forcible rapes.

The 2014 average rate of violent crime in Region G is 20.74%, lower than the state rate of 44.93%. Shannon County had the highest rate of violent crime in 2014 at 29.06%, followed by Wright County at 27.64% and Carter County at 27.13%.

## Domestic Violence

Domestic violence incidents include any dispute arising between spouses, persons with children in common whether or not they live together, and non-married persons who have lived together in the past.

Reported incidents ranged from a total of 2 in Wright County to 255 in Texas County, compared to 0 in Douglas County to 330 in Howell County in 2012.

Texas County saw the highest increase in cases between 2012 and 2018, with a rate change of 87.5%. Carter County also saw an increase in reported incidents, with change of 9.1%. The other seven counties in Region G had a decrease in the number of incidents between 2012 and 2018. Missouri saw an increase of 6.0%.

**Table 3.2 Domestic Violence Incidents, 2012 to 2018 Comparison**

	Total Reported Incidents 2012	Incidents between Persons who have a Child in Common 2012	Total Reported Incidents 2018	Incidents between Persons who have a Child in Common 2018	Percent Change Total Reported Incidents 2012 to 2018

## Child Abuse and Neglect

There were 183 substantiated child abuse and neglect incidents in Region G in 2018, down from 193 in 2016. The rate of change showed an increase of 92.3% in Texas County, 50% in Reynolds County, and approximately 35% in both Oregon and Wright Counties. Neglect accounted for a total of 89 substantiated cases in the region in 2018, while physical abuse accounted for 67 cases and sexual abuse 54 cases.

**Table 3.3 Substantiated Child Abuse or Neglect by Category of Abuse by County, 2018**

### Family Assessments

Substantiated child abuse/neglect and family assessments show an increasing trend from 2009 to 2015.

### Figure 3.2 Substantiated Child Abuse/Neglect and Family Assessments, 2006 – 2015 Entering/Re-entering State Custody

Children entering and re-entering state custody show a dramatic spike in Carter, Howell, Oregon, Ozark, and Wright Counties from 2017-2019. Rates decreased in Reynolds, Shannon, and Texas counties between 2017 and 2019, but increased in the other six counties in Region G.

**Table 3.4 Children Entering/Re-Entering State Custody, 2017-2019 Comparison**

## Juvenile Court Referrals

Region G had an average rate of 12.3 juvenile law violation referrals per 1,000 persons in 2019, compared to the Missouri average of 24.3. Missouri saw an average decrease of 17.90% between 2015 and 2019, while Region G experienced a decrease of 28.07%. Oregon County saw a 245.71% increase in referrals.

**Table 3.5 Juvenile Law Violation Referrals (per 1,000), 2015-2019 Comparison**

## Illegal Drug Use and Alcohol Abuse

The Missouri Highway Patrol reports 519 DWI arrests and 1,298 drug-related arrests in 2018, a decrease from 759 DWI arrests in 2010, but an increase from 1,048 drug-related arrests in 2010. In 2010, 76 methamphetamine labs were seized by the Highway Patrol in Region G, but none were seized in 2018.

**Table 3.6 Drug and Alcohol Related Arrests and Meth Lab Seizures, 2018**

	DWI Arrests	Liquor Law Violations	Drug-Related Arrests	Meth Lab Seizures

## Alcohol and Tobacco Access and Abuse

In Region G, Reynolds County had the highest rate of establishments selling alcohol at 29.87 per 100,000 population. This exceeds the state average of 17.42. Douglas County had the lowest rate at 7.31.

Excessive drinking rates in Region G averaged 15%, compared to the state average of 19%. Excessive drinking rates showed an increase in Howell County and Texas County, the only two counties to which data exist for 2014.

**Table 3.7 Alcohol and Tobacco Access and Excessive Drinking**

## HIV and Hepatitis C Outbreak Risk Due to Opioid Use

The CDC has identified 220 counties (top 5% nationwide) at risk of outbreaks of HIV and/or hepatitis C as a result of opioid use. Three Region G counties fall into this list: Reynolds County (national rank: 55), Ozark County (national rank: 185), and Wright County (national rank: 194.)

**Table 3.11 HIV and HCV Incidence in Region G, 2016 and 2017 (rates per 100,000)**

## Adult Tobacco Use

In 2018, an average of one in four Region G adults smoked. This rate is significantly lower than 42.5% in 2007 and 40.5% in 2011. However, it still exceeds the state average of 20% in 2018. Half of smokers in the region made an attempt to quit in 2016. Texas County had the highest rate of smokers attempting to quit, with 60.22 of adult smokers. Ozark County had the lowest rate of smokers attempting to quit in 2016, with only 31.85%. This compares to the state average of 57.05%.

**Table 3.12 Adult Smoking and Secondhand Smoke Exposure**

## Youth Tobacco Use

The 2019 rate of high school students who smoke in Missouri is 9.2%, compared to the US rate of 5.8%. More than one in ten (11.4%) high school males in Missouri smoke cigars, compared to 9.0% nationwide, and 10.9% of Missouri high school students use e-cigarettes, compared to the national average of 27.5%. County-level data are not available for youth tobacco use.

**Table 3.13 Missouri Youth Tobacco Use to U.S. Comparison, 2019**

	Smoking	Males Smoking Cigars	Using E-Cigarettes
Missouri	9.2%	11.4%	10.9%
U.S.	5.8%	9.0%	27.5%

## E-Cigarette and Smokeless Tobacco Use

Smokeless tobacco use in Ozark County, Reynolds County, and Shannon County increased from 2007 to 2016. In the other six counties in Region G, smokeless tobacco use dropped between 2007 and 2011, but then climbed again between 2011 and 2016.

**Figure 3.4 Trends in Smokeless Tobacco Use, 2007 – 2016**

Missouri Department of Health and Senior Services. Missouri Public Health Information Management System (MOPHIMS). Missouri Resident County-Level Study Profile. 2016

E-cigarettes were introduced in the U.S. in the mid-2000s, and sales have increased rapidly since 2007. In 2011, the prevalence of e-cigarette use (defined as used during at least one day in the past 30 days) among high school students was 1.5%. By 2015, it had climbed to 16%, passing use of regular cigarettes among high school students. Young adults (age 18 – 24) used e-cigarettes at a rate of 13.6% in 2013 – 2014, and adults age 25 and older used e-cigarettes at a rate of 5.7% in the same period.

The Missouri Department of Health and Senior Services reports findings from its 2017 Missouri Youth Tobacco Survey and Youth Risk Behavior Survey (2007 – 2017) that suggest youth smoking rates are declining overall. However, they report the introduction of e-cigarettes caused an increase in rates of high school students who use vaping products, with one in four high school students trying a vaping product (2013 – 2015).

**Table 3.14 E-Cigarette and Smokeless Tobacco Use-Percent**

### **Tobacco Related Hospitalizations and Deaths**

Region G had a total of 3,547 estimated deaths attributable to smoking between 2007 and 2017, for a rate of 163.29. Carter County had the highest rate of smoking attributable deaths in the region at 210.35., and Oregon had the lowest rate at 140.0. Rates in all nine counties exceeded the state rate of 138.93.

## **Section IV**

### **Injury**

## Unintentional Injuries

Between 2005 and 2015 the rate of emergency room visits and hospitalizations in Region G due to unintentional injuries was slightly higher than the state average. Region G had an average rate of deaths from unintentional injuries of 60.51, exceeding the state rate of 49.98.

The highest rate of deaths in the region came from motor vehicle accidents, at 29.25, followed by poisoning from drugs and alcohol at an average rate of 9.82. Reynolds County had the highest rate of death at 96.07, with 44.92 caused by motor vehicle accidents. Wright County had the lowest rate of deaths at 48.63, just under the state average of 52.44.

**Table 4.1 Death Rates: Total Unintentional Injuries by Type, 2005 – 2015 and 2009-2019**

			Deaths (rate)	Motor Vehicle Deaths	Firearm Deaths	Poisoning: Drugs/Alco hol	Falls	Drowning (non- boating)

## Teen Unintentional Injuries

The rate of teen unintentional injuries, homicides and suicides in Region G exceeded the state average in the 2010-2014 reporting period, with 62.42 and 47.1 respectively. Missouri's rate climbed in the next reporting period (2015-2019) to 56.3, continuing to exceed the (2010-2014) state average of 47.1.

Reynolds County experienced the sharpest increase in teen unintentional injuries, with growth of 472.9% between reporting periods. Shannon County saw a 266.84% increase in teen injuries, and Douglas County saw a 88.99% increase between reporting periods.

**Table 4.2 Teen Unintentional Injuries, 2010-2014 to 2015-2019 Comparison**

## Children and Youth Hospitalizations for Substance Abuse and Mental/Behavioral Health

Six of nine Region G counties saw an increase in substance abuse hospitalizations for children and teens. Three of the nine counties also saw an increase in mental and behavioral health hospitalizations.

**Table 4.3 Children and Youth Hospitalization for Substance Abuse and Mental/Behavioral Health**

## Child Preventable Hospitalizations

Between 2015-2019, the rate of preventable child hospitalizations dropped for every county in Region G, from an average of 8.58 in 2015 to a rate of 5.76 in 2019. The region slightly exceeds the state rate of 7.6 in 2015, and is lower than the state average of 6.9 in 2019.

## Motor Vehicle Fatalities and Seat Belt Use

Between 2009-2019, Region G reported motor vehicle deaths at a rate of 25.29. Reynolds County had the highest rate of motor vehicle deaths, with 44.92, and Wright County had the lowest rate, at 16.89.

On average, the region had an alcohol-impaired driving death rate of 27%, matching the state average. A total of 60 Region G residents who died in motor vehicle accidents were not wearing a seat belt. Six of those deaths were unbelted teens.

A Missouri Department of Transportation survey conducted in selected counties that included Howell and Wright Counties showed that the majority of people wear a seat belt. Howell County observations reported an estimated 75.7% of vehicle occupants buckled up, while observations in Wright County resulted in an estimation that 86.2% of residents wear a seat belt when in the car.

**Table 4.5 Motor Vehicle Fatalities and Seat Belt Use**

## Maternal and Child Health Indicators

### Live Births

Region G saw 1,656 live births in 2017, nearly level with 1,660 births in 2010 and 1,671 in 2007. The highest number of births occurred in Howell County, with 521 live births in 2017.

## Education Status of New Mothers

In 2019, 22.46% of new mothers had less than 12 years of education, this compares to 18% in 2017 and 22.6% in 2010. Only Carter and Ozark Counties saw a rate decrease between 2017 and 2019.

**Table 5.2 Education Status: Mother's Years of Education**

## Infant Birth Weight

In 2019, infants were born at a low birth weight in Region G at a rate of 7.45%, a decrease from 8.22% in 2017. Two counties saw an increase in low birth weight infants between 2017 and 2019. Carter County's rate increased by 120.02%, while Wright County's rate increased by 63.32%.

**Table 5.4 Infant Low Birth Weight, 2017-2019 Comparison**

## Gestation

In 2019, an average of 9.91% of births occurred pre-term, or at less than 37 weeks of gestation. This compares to the state average of 10.89. Six counties in the region saw a significant decrease in the rate of preterm babies born between 2010 and 2019. Ozark County saw an 14.62% rate increase and Wright saw a 16.81% increase.

**Table 5.5 Gestation: Preterm (less than 37 completed weeks)**

	Rate per 100 2010	Rate per 100 2017	Rate per 100, 2019	Percent Change 2010 to 2017

## Prenatal Care

All Region G counties, except Shannon and Carter counties had a higher rate of inadequate prenatal care in 2019 than the state average. Oregon and Texas Counties saw the most significant increase in the rate of inadequate prenatal care in a 2017 to 2019 comparison, with 40.33% and 25.53% growth respectively. Douglas, Texas, and Howell Counties also recorded a rate of women receiving no prenatal care that exceeds the state rate.

Prenatal care helps to ensure a healthy pregnancy and reduce the risk of complications for the baby and the mother. The American Academy of Pediatrics and the American College of Obstetricians and Gynecologists recommend prenatal care with early and ongoing risk assessment for all women. Research shows that lower rates of prenatal care are linked to younger women, women with less education, women giving birth to their fourth or more child, and women of non-Hispanic Native Hawaiian or Other Pacific Islander race and ethnicity.

In 2019, approximately 8 in ten (78.91%) Missouri women received adequate prenatal care. In Region G, that rate was lower, with only 74.07% of women receiving adequate prenatal care.

**Table 5.6 Prenatal Care: Inadequate or None**

### Prenatal Weight Change

In 2017 and 2019, Region G had a slightly higher rate than the state of women who gained less than 15 pounds during pregnancy. Douglas, Wright and Shannon Counties saw an increase in this rate between 2017 and 2019 with 46.5%, 7.20%, growth and 4.35% growth respectively.

Region G's rates of women who gained more than 44 pounds during pregnancy are comparable to the state average. However, Region G counties have a slightly higher rate of mothers who are 20% or more overweight. Oregon County had the highest rate at 54.21% in 2019. Shannon County had the lowest rate at 44.32%, compared to the state average of 51.5%.

**Table 5.8 Prenatal Care: Weight Change, 2017 to 2019 Comparison**

### Smoked During Pregnancy

According to the Missouri Department of Health and Senior Services, 22.83% of mothers in Region G smoked during pregnancy in 2019, compared to 12.77% of mothers in Missouri.

Between 2017 and 2019, the rate of mothers who smoked during pregnancy dropped in Carter, Howell, Texas and Wright counties. Ozark County saw a rate increase of 40.68%.

**Table 5.9 Smoked During Pregnancy, 2010 to 2017 Comparison**

## Women, Infants, and Children (WIC) Program

A total of 4,627 persons in Region G received WIC benefits in 2019, a decrease from 6,272 in 2016.

**Table 5.10 Missouri Resident WIC Participants by Age**

In 2019, an average of 55.84% of children under five years old in Region G were income eligible to participate in the WIC program, and 67.7% of those children were participating. This is a slight decrease from 61.1% and 75.5% in 2016.

The largest increase in children eligible and participating occurred in Howell County and Reynolds County with an increase of 35.35% and 46.15% respectively. Texas County saw a 12.79% increase in children eligible and participating between 2013 and 2016, and Wright County had a 0.33% increase. The other five counties in Region G experienced a decrease.

### **Infection and Sexually Transmitted Diseases**

## Infections

### Communicable Disease

Communicable diseases can be passed from person to person. Local public health agencies monitor diseases in their community through active and passive surveillance. They quickly investigate reported illness in order to slow and stop the spread of disease. Reportable diseases for Region G counties are described in Table 6.1.

**Table 6.1 Reported Communicable Diseases, 2018**

### Hospitalizations Related to Infections

Hospitalizations related to infections occurred at a rate of 52.46 in Region G in 2015, compared to the state rate of 52.12. All nine counties in Region G saw an increase in hospitalization rates related to infection between 2010 and 2015. Reynolds County and Shannon County experienced the highest rate increase at 35%. Carter County saw the lowest rate increase at 9.8%.

**Table 6.2 Inpatient Hospitalizations Related to Infections, 2010 to 2015 Comparison**

### Deaths Related to Infections

The regional rate of deaths related to septicemia remained fairly level between 2010 and 2017, and were comparable to the state rate.

Between 2014 and 2017, Region G counties saw an average rate of deaths due to pneumonia and influenza that was higher than the state rate of 16.91. Reynolds County had the largest rate increase between the two reporting periods of 2010 to 2013 and 2014 to 2017, at 86.5%. Carter County experienced a 26.7% increase, and Shannon County had a 19.2% rate increase.

Overall, Region G had a rate of death by infection that was higher than the state rate. Septicemia deaths in Region G occurred at a rate of 11.20 per 100,000 in 2014 – 2017, while the state rate was 11.14. Pneumonia and influenza deaths in Region G occurred at a rate of 19.17 during the same reporting period, compared to the state rate of 16.91. The rate of deaths from other infections and

parasites in Region G between 2014 and 2017 was 6.63 per 100,000 population, while the state rate was 5.06 for the same time period.

	Septicemia 2010 – 2013	Septicemia 2014 - 2017	Pneumonia and Influenza 2010 - 2013	Pneumonia and Influenza 2014 - 2017	% Change P&I	Other Infections and Parasites 2010 - 2013	Other Infections and Parasites 2014 - 2017

## Tuberculosis

In 2016, 21 cases of latent tuberculosis infection (LTBI) were reported in Region G, a decrease from 38 cases in 2012. LTBI indicates a person has TB infection in the body, but has not developed TB *disease* and cannot spread TB to other people. LTBI may last for a lifetime and never develop into TB disease.

**Table 6.4 Latent Tuberculosis Infection (rates per 100,000), 2012 to 2016 Comparison**

## Sexually Transmitted Infections

Chlamydia is the most commonly reported sexually transmitted infection in the U.S. It is caused by a type of bacteria that can be passed from person to person during vaginal, oral or anal sex. Chlamydia can be treated with antibiotics, but if left untreated, it can cause pelvic inflammatory disease and can lead to long-term health problems including difficulty getting pregnant. Region G saw a total of 79 chlamydia cases in 2021 (JANUARY-NOVEMBER), a decrease from 334 in 2018.

Gonorrhea is the second most commonly reported sexually transmitted infection in the U.S and often occurs with chlamydia. It is also caused by bacteria that can be passed to other people during vaginal, oral or anal sex. Gonorrhea often causes only mild symptoms or no symptoms at all. Yearly screening is recommended for women younger than 25 years old, or older than 25 with risk factors for gonorrhea. If left untreated, it can lead to long-term health complications. Region G saw a total of 28 gonorrhea cases in 2021, a decrease from 78 in 2018.

Syphilis is also caused by bacteria, and is spread from person to person when bacteria enter the body through a cut in the skin or through contact with a partner's syphilis sore, called a chancre. Syphilis is often spread through sexual contact and increases a person's risk of becoming infected with or transmitting HIV. Syphilis can be treated with antibiotics, but if left untreated, it can lead to very serious illness later in life. Syphilis cases in Region G DEcreased dramatically between 2018 and 2021, from 386 cases to 5 cases.

**Table 6.5 Sexually Transmitted Diseases, 2018 to 2021 Comparison**

### Poor or Fair Health, Physical Health, and Mental Health

In comparison with the Missouri statewide average, counties in Region G had a higher rate of poor or fair health days in both 2014 and 2019. The rates of poor physical health days in Region G also exceeded the state average in 2014 and 2019. Three of the counties had an equal to or lower rate of poor mental health days than the state average in 2014, but by 2019, the counties' rates all exceeded the state average.

**Table 7.2 Poor or Fair Health, Physical Health, and Mental Health**

	Poor or Fair Health 2014	Poor or Fair Health 2019	Poor Physical Health Days 2014	Poor Physical Health Days 2019	Poor Mental Health Days 2014	Poor Mental Health Days 2019

## Activity Limitation

Between 2014 and 2019, Howell County saw an increase in percent of the population who were physically inactive. Carter County and Shannon County also saw an increase of approximately 3% each. All counties in Region G improved the rate of access to exercise opportunities, however the average rate for the region still falls short of the state rate.

**Table 7.3 Physical Inactivity and Access to Exercise Opportunities, 2014 and 2019 Comparison**

	Physical Inactivity 2014	Physical Inactivity 2019	% Change Physical Inactivity	Access to Exercise Opportunities 2014	Access to Exercise Opportunities 2019	% Change Access to Exercise Opportunities

## Food Environment

Food Environment Index ranges from 0 (worst) to 10 (best). It is measured by both income and the distance a person lives from a grocery store or supermarket. These stores traditionally provide healthier options than convenience stores or smaller grocery stores. For rural areas, “living close” to a grocery store means within 10 miles.

Areas without access to fresh fruit, vegetables and other healthful whole foods because of limited numbers of grocery stores or Farmers Markets are designated by the USDA as *food deserts*. Food deserts are correlated with high prevalence of overweight, obesity, and premature death.

Food *insecurity* looks at the barrier of cost as a factor in access to healthy foods. It estimates the percentage of the population that did not have access to a reliable source of food during the past year.

Table 7.4 shows the food environment index, the percent of people who are food uncertain and food uncertain with hunger, food affordability and food bank distributions.

**Table 7.4 Food Environment**

	Food Environment Index <sup>1</sup> 2019	Percent of Individuals Food Uncertain <sup>2</sup> 2016	Percent of Individuals Food Uncertain with Hunger <sup>2</sup> 2016	Food Affordability <sup>2</sup> (% of median income) 2016	Food Bank Distributions <sup>2</sup> (lbs per capita below 100% poverty level) 2016	Percent of Housing Units without Complete Kitchen Facilities <sup>3</sup> 2015-2019

## Overweight or Obese

The prevalence of adult obesity in Region G decreased slightly between 2014 and 2019, from 33% to 32%. Reynolds County had the highest rate of adult obesity in 2019 at 35%, while Wright County had the lowest at 29%. Howell County saw the largest increase between 2014 and 2019, with a 13.8% change. Ozark County also increased by 3.5%, and the other counties remained level or decreased the rate of adult obesity.

The average rate of WIC children in the Region who were considered obese in 2016 was 12.98%, compared to the Missouri average of 14.31%.

**Table 7.6 Overweight or Obese**

	Adult Obesity Prevalence <sup>1</sup> 2014	Adult Obesity Prevalence <sup>1</sup> 2019	Percent Change	WIC Children (24 – 59 months) Obese 2016

## High Blood Pressure

Generally, the prevalence of persons with high blood pressure in Region G has trended higher since 2007. The average rate for the region in 2007 was 25.9. It climbed to 33.1 in 2011 and to 39.36 in 2016. All nine counties in the region saw an increase in high blood pressure prevalence between 2007 and 2016.

**Figure 7.1 High Blood Pressure Trend, 2007 - 2016**

## High Cholesterol

The prevalence of persons with high cholesterol in Region G increased between 2007 and 2011, but then decreased slightly between 2011 and 2016. Overall, the prevalence between 2007 and 2016 shows an increase in every county, with Wright County showing the largest increase at 102.2%, followed by Howell County at 100.5% increase between 2007 and 2016. This compares to the state change of 89.8% for the

**Table 7.8 High Cholesterol Among Persons Age 35 and Older Who Have Had Cholesterol Checked, 2016**

## Asthma

In Region G, the prevalence of asthma has exceeded the state average since 2007. Between 2007 and 2016, Region G saw an average increase of 8% in the prevalence of asthma, compared to no change in the state rate in the same period. Six of the nine Region G counties saw an increase in the prevalence of asthma between 2007 and 2016, with Howell County recognizing the highest increase at 35.6%. Oregon County and Ozark County saw the most significant decrease in prevalence between 2007 and 2016 with a 15% change.

**Table 7.11 Asthma Prevalence, 2007 to 2016 Comparison**

	2007	2011	2016	Percent Change 2007 to 2016

## Mammogram Screening

Between 2011 and 2016, the percent of women 40 years old and older who have never had a mammogram increased significantly in eight of the nine Region G counties. Carter County saw the highest increase from a rate of 4.9 in 2011 to 47.1 in 2016 (860% change). Oregon County and Ozark County had changes of 352% and 337% respectively. The percent change in five of the counties exceeds the state change at 212%.

**Table 7.13 No Mammogram within Past Two Years (women 40+ years)**

## Cancer Registry Incidence

Between reporting periods of 2008 – 2010 and 2011 – 2013, rates of breast cancer increased in Region G, while rates of cervical cancer, colon cancer, prostate cancer, and lung and bronchus cancer all decreased. Regional rates of cervical cancer, colon cancer, and lung and bronchus cancer exceed the state rates.

**Table 7.15 Cancer Incidence, 2008 – 2010 to 2011 – 2013 Comparison**

## **Section VIII**

### **Leading Causes of Death**

## Premature Death

The average Region G resident can expect to live about 75 years, depending on where they live in the region. Texas County has the highest life expectancy at 77.1 years, and Carter County has the lowest life expectancy in the region at 73.2 years.

Premature death is measured in years of potential life lost before age 75 per 100,000 population (age-adjusted). Shannon County saw the highest increase in the rate of premature death between the two reporting periods, and Texas County saw the largest decrease.

**Table 8.1 Life Expectancy and Premature Death**

	Life Expectancy 2017-2019	Premature Death (2015 – 2017 data)	Premature Death (2017-2019 data)	Percent Change Premature Death

## Causes of Death

Chronic Lower Respiratory Disease (Asthma, Emphysema, Bronchitis) was the leading cause of death in Region G in 2019 with an age-adjusted rate of 220.56 per 100,000 population, on average.

Howell County had the highest rate of Chronic Lower Respiratory Disease (Asthma, Emphysema, Bronchitis) in the region at 278.51 compared to the state average at 232.63. Ozark County had the lowest rate at 152.55.

Accidental Discharge of Firearms was the second leading cause of death with an average rate of 271.1 per 100,000 residents in the region. This compares to the state rate of 186.5 for Accidental Discharge of Firearm deaths.

**Table 8.2 Causes of Death (age-adjusted rate per 100,000)**

## Infant and Child Mortality

Region G posted a higher infant mortality rate than the state average in both periods, but did show a decrease of 9.12% in the infant mortality rate between 2010 and 2019. Region G also saw a decrease of 26.36% in the death rate among children 1 – 14 years old during the same period. The death rate among children 15 – 17 years old increased by 42.67% in the region, and increased 8.58% in Missouri.

## **Section IX**

### **Health Care System Indicators**

## Access to Care

Access to primary care, dental care, hospital services, and specialty care improve overall health and contribute significantly to a community's economic health. In Region G, these resources are limited, even for people with health insurance coverage, access to transportation, and no financial difficulty.

### Health Care Facilities

According to the Missouri Department of Health and Senior Services, one in six rural Missourians gets essential health services from a Federally Qualified Health Center (FQHC). Rural Health Clinics (RHC) are also intended to increase access to primary care in rural areas.

**Table 9.1 Health Care Facilities in Region G, 2019**

	Hospitals	Rural Health Clinics	Federally Qualified Health Clinics
Carter	0	1	1
Douglas	0	1	2
Howell	2	11	2
Oregon	0	2	1
Ozark	0	2	1
Reynolds	0	1	3
Shannon	0	4	1
Texas	1	6	2
Wright	0	7	2

Missouri Department of Health and Senior Services. Local Public Health Agency Profiles. July 2019.

## Providers

Health Professional Shortage Areas (HPSA) are designated when there aren't enough health care resources to meet the needs of residents. This can occur when there are no providers, not enough providers, more patients than providers can see, or transportation barriers that prevent patients from reaching providers.

**Table 9.1 Population to Provider Ratio by Type of Provider, 2019**

	Population per Physician	Population per Dentist	Population per Mental Health Provider
Carter	6,170	3,080	1,030
Douglas	6,680	2,660	1,480
Howell	1,030	2,360	440
Oregon		10,560	4,280
Ozark	4,620	2,300	
Reynolds	2,150	1,570	520
Shannon			8,250
Texas	2,340	5,150	2,860
Wright	6,100	2,620	800
<b>Region G</b>	<b>4,152</b>	<b>3,788</b>	<b>2,458</b>
Missouri	1,420	1,760	5,500

Robert Wood Johnson Foundation, County Health Rankings and Roadmaps. 2019.

## Health Insurance Coverage

The rate of uninsured children in Region G is roughly double the state rate. The average rate of total uninsured persons in Region G is 10.3 versus the state rate of 5.8. Reynolds County has the highest rate of uninsured persons in the region, at 16.80% All nine counties have a rate higher than the state average, however the rates did decrease in seven of the nine counties between 2014 and 2018.

**Table 9.2 Health Insurance Coverage, 2012 to 2016 Comparison**

	Percent of Population with No Health Care Coverage <sup>1</sup> (age 18 – 64)	Uninsured Children <sup>2</sup> 2014	Uninsured Children <sup>2</sup> 2018	Percent Change Uninsured Children 2014-2018
Carter	29.89	10.50%	7.70%	-26.66%
Douglas	17.88	10.30%	7.60%	-26.21%
Howell	19.21	8.80%	6.80%	-22.72%
Oregon	26.37	11.00%	7.40%	-32.72%
Ozark	17.67	13.30%	8.10%	-39.09%
Reynolds	24.13	9.00%	16.80%	86.66%

## Delayed or No Care

On average, residents of Region G did not get medical care because of the cost at a rate of 53.88, slightly higher than the state rate of 52.72. Oregon County had the highest rate at 66.01. Texas County saw the highest rate of residents who had a routine physical checkup two or more years ago, at 27.1, compared to the state rate of 16.26.

Dental visits were delayed in Region G at a rate of 28.55, compared to the state rate of 18.95, and the region had a rate of 40.81 persons with a dental visit two or more years ago. Shannon County experienced the highest rate of delayed dental visits with 47.16, and Texas County had the highest rate of residents not seeking dental care due to cost.

**Table 9.4 Delayed or No Care, 2019**

	Did Not Get Medical Care Because of Cost (delayed or did not get needed care within past 12 months)	Last Routine Physical Checkup 2+ Years Ago	Last Visit to Dentist 2+ Years Ago	Needed to See a Dentist in Past 12 Months, But Could Not Due to Cost
Carter	60.04	22.83	43.81	26.89

## **Section X**

### **Community Health Resources**

## Community Action Agencies

Community Action Agencies are located in each county in the Region G area. A Neighborhood Center is located in each of the nine counties. The Neighborhood Centers provide services for the low income population for the purpose of helping each family or individual achieve self-sufficiency and stability.

Services provided at the Neighborhood Centers include the following:

- Head Start
- Home Weatherization Program
- Housing Assistance
- Energy Crisis Intervention Program
- Life Skills Training
- Parenting Classes
- Emergency Assistance
- Referrals and Linkage to Other Community Services

## Community Health Centers

Three Community Health Center organizations are available to provide health care to medically underserved residents in Region G. Services vary by clinic site, but may include primary and preventive healthcare, mental health, and oral health treatment, as well as supportive services that promote access to health care and ensure patient well-being.

Missouri Highlands Health Care provides services at six clinic sites in Carter County, Reynolds County, and Shannon County.

**Table 10.1 Community Health Centers**

	Street Address	City	County
Big Springs Medical Clinic	402 Main St	Van Buren	Carter
Big Springs Behavioral Health	105 Walnut	Ellington	Reynolds
Big Springs Dental Clinic	115 Walnut	Ellington	Reynolds
Ellington Family Clinic	205 Walnut	Ellington	Reynolds
Valley Springs Medical Clinic	County Road 814	Black	Reynolds
Shannon County Family Clinic	209 Main St	Eminence	Shannon

Missouri Ozarks Community Health Center provides services at three clinic sites in Douglas County, Ozark County and Wright County.

## Mental Health Services

The Missouri Department of Mental Health offers clinical treatment and recovery support services through a variety of programs, at multiple locations in Region G.

### Community Mental Health Centers

Services for the Missouri Department of Mental Health's Division of Comprehensive Psychiatric Services are accessed through 25 service areas, with each service area serving particular counties in Missouri. Administrative Agents (community mental health centers) are responsible for providing these services. The nine counties in Region G are served by two community mental health centers.

**Table 10.5 Community Mental Health Centers**

	<b>Counties Served</b>
<b>Family Counseling Center</b> 925 Highway V PO Box 71 Kennett, MO 63857 (573) 888-5925	Carter Reynolds

<b>Mountain Grove Medical Complex</b> 1604 North Main Mountain Grove, MO 65711 (417) 926-6563	Douglas Howell Ozark Oregon Shannon Texas Wright

## CSTAR

The Comprehensive Substance Treatment and Rehabilitation (CSTAR) Program provides a continuum of care approach to substance abuse treatment. CSTAR offers a combination of clinical and supportive services, including temporary living arrangements when appropriate, that vary in duration and intensity, depending on individual needs.

### CSTAR Adolescent

The CSTAR General Adult program offers intensive outpatient treatment services to adolescents with substance abuse problems.

**Table 10.6 CSTAR Adolescent**

	Street Address	City	County
Family Counseling Center	3411 Division	West Plains	Howell
Family Counseling Center	1591 North Highway 63	Houston	Texas

### CSTAR General Adult

The CSTAR General Adult program offers intensive outpatient treatment services to both men and women with substance abuse problems.

**Table 10.7 CSTAR General Adult**

	Street Address	City	County
Family Counseling Center	1015 Lanton	West Plains	Howell
Southeast Missouri Community Treatment	1597 Highway 63	Houston	Texas

## Compulsive Gambling

Individuals with gambling problems and their family members can receive counseling services and referrals for other supportive interventions, including 12-step support groups, financial planning and remediation, and legal assistance. Treatment is individualized, and services include individual and group counseling and family therapy. Services are funded through the Compulsive Gamblers Fund, which is derived from the fees paid by Missouri casino properties. Region G has one treatment center, located in Texas County.

**Table 10.8 Compulsive Gambling**

	<b>Street Address</b>	<b>City</b>	<b>County</b>
Southeast Missouri Community Treatment	1597 Highway 63	Houston	Texas

**Primary Recovery Plus**

The Primary Recovery Plus program provides a continuum of care, including detoxification, outpatient services, and residential support as clinically appropriate. Services are designed to enhance participation in treatment and help improve individual function, promote community integration, and foster recovery from substance use disorders. These services are available at five locations in Region G.

**Table 10.9 Primary Recovery Plus**

	<b>Street Address</b>	<b>City</b>	<b>County</b>

Family Counseling Center	8401 Outer Road	Mtn. Grove	Wright

### Substance Abuse Traffic Offender Program

Agencies, certified by the Department of Mental Health, Division of Alcohol and Drug Abuse, provides services to individuals involved in an alcohol or drug-related traffic offense through the Substance Abuse Traffic Offender Program (SATOP). Five agencies provide SATOP services in the Region G area.

**Table 10.10 SATOP**

Southeast Missouri Community Treatment Center	1597 Highway 63	Houston	Texas
Safety Council of the Ozarks	100 East State St	Mtn. Grove	Wright

### Developmental Disabilities

The Missouri Department of Mental Health, Division of Developmental Disabilities (DD) provides services for individuals that have developmental disabilities such as mental retardation, cerebral palsy, head injuries, autism, epilepsy, and certain learning disabilities. Region G is located in three Division of Developmental Disabilities' regions. The regional offices serve as the primary points of entry into the service system.

**Table 10.11 Developmental Disabilities**

## Long Term Care Facilities

Skilled Nursing Care Facilities (SNF) provides assistance and supervision with medical and personal care needs on a 24-hour basis. Residential Care (RCF) is for individuals needing a limited amount of care and medical supervision. Assisted Living Facilities (ALF) are available for individuals who need little to no care.

## **Public Health Services**

Local public health agencies (LPHA) are committed to the protection and enhancement of health and the quality of life for all members of the community. Services include assessment of health and environmental status, development of policies and priorities, and assurance of an appropriate response to the identified needs. A LPHA, also known as a county health department or health center, is located in each county in Region G. Each LPHA offers a range of services that vary by county.

Environmental public health programs promote healthy environmental conditions and reduce risks associated with communicable disease. Health promotion activities educate people about prevention and improve access to preventive services designed to prevent disease and improve health and equality of life. Immunization services increase the proportion of children and adults who are vaccinated against vaccine-preventable disease. WIC improves the health of nutritionally at-risk women, infants and children under five years old.

Prenatal case management supports at-risk pregnant women. Family planning services improve pregnancy planning and prevent unintended pregnancy. Some of the local public health agencies also offer in-home and home health services for uninsured or underinsured older and disabled residents. Home health services include skilled nursing and aide services, physical and speech therapy, and the provision of medical supplies and equipment.

**Table 10.14 Public Health Services**

## Transportation

Limited transportation resources are available across the region. OATS, SMTS, and Medicaid Non-Emergency Transportation services vary by city and county. Senior Centers provide limited transportation services for seniors within their communities.

## Shelters for Abuse Victims

Three shelters are available in Region G for victims of domestic violence. These agencies offer a variety of residential and non-residential services.

**Table 10.16 Shelters for Abuse Victims**

## **Section XI**

### **Community Health Survey**

## Executive Summary

A 43-question digital survey was administered in Region G with each community using their own methods of dissemination. Some provided a link on their agency website or through social media channels. Some placed an article or an advertisement in the local newspaper. Others sent a link to community members via email, enlisted the help of the local library, or made the survey available in their health departments. The survey remained open for one month, from September 30th, 2021 through October 31st, 2021.

A total of 746 persons completed the survey, with 84.05% self-identifying as *female*, 15.95% as *male*, and 0.00% as *other, not listed*. The age of participants ranged from 18 years old to over 80 years old.

n=1,001

The majority (93.64%) of participants identified as Caucasian, with less than 5% identifying as people of color. More than nine in ten (96.28%) participants self-identified as *not* of Hispanic or Latino heritage.

Survey participants represented a fairly even range of annual household income levels, with approximately 20% in each of four categories between *less than \$20,000* to *\$50,000 to \$74,000*. Just over 10% answered *\$75,000 to \$100,000*, and 12.69% selected *more than \$100,000*.

Approximately 31.95 of survey participants graduated from high school and 57.45 had a college degree or highe3. Just over 3.49% reported *did not graduate from High School*.

Survey participants live in the following counties:
